

ConstructionLCA

Proposal to ECO Platform for collaboration with Jane Anderson of ConstructionLCA Ltd

What will ECO Platform provide to ConstructionLCA?

- Free Membership of ECO Platform in the LCA Practitioner (<20 people) Category
- Opportunity to participate in the ECO Platform Technical Working Group
- Acknowledge Jane and ConstructionLCA as the author of any data and articles provided by her and used by ECO Platform internally or externally
- To coordinate the request for collection of annual data on registered EPD from ECO Platform EPD Programme Operators. Ideally this will be provided directly by the programme and will cover, if possible:
 - Number of Registered EPD
 - Type of EPD (trade association/company, generic/specific product)
 - Product type covered by EPD (e.g. numbers for each PCR used)
 - Scope of EPD (information modules included)
 - Geography: Countries providing data for use in EPD
 - Verified EPD tools registered

What will ConstructionLCA provide to ECO Platform?

- Access to collated and analysed and data from ConstructionLCA's EPD Numbers Survey for ECO Platform EPD Programme Operators
- Participation in Technical Working Group in the fields of my expertise
- Supporting ECO Platform as necessary with Communication/Public Relations for ECO Platform, e.g. by providing a small number of articles or case studies per year on relevant subjects agreed between ECO Platform and ConstructionLCA.
- Support with the understanding of stakeholders and the added value that EPD can provide to the market.

Ideas for the Future for ECO Platform...

- Provide an information hub for EPD and construction product LCA where you can find links to PCR and standards; information on the indicators. Would also cover how different actors (architects, regulators, manufacturers etc) can or do use EPD, e.g. links to case studies on EPD in Green Public Procurement, impact reduction etc; how EPD are used in Green Building programmes, etc
- Provide guidance on developing regional scenarios and on use of "100%" scenarios and sub-scenarios to enable use of data in BIM
- Set up a forum for Approved Verifiers from all the ECO Platform programmes – maybe with a low membership cost, and provide webinars, briefings etc.
